PROS NEED PROS

Why consider a Moffett truck for deliveries?

The Moffett forklift is trailer-mounted on the rear of a truck or rig. This creates more space to increase the capacity for loads and deliveries. Don't let site access challenges or clunky delivery logistics be a challenging part of your purchasing experience!

Save time

- Unloading starts within minutes of arrival
- Drivers are fully trained and need no assistance
- Increased load size mean less deliveries
- Drop product off exactly where you need it, keeping your project moving

Extended delivery options

- Panto-graph and telescoping forks provide extended reach capabilities
- Four-way steering for more maneuverability
- Navigate tight configurations quickly and safely
- Ability to cover different, more complicated terrain
