

Streamline Your Ordering With **ePROCUREMENT** INTEGRATIONS

An **eProcurement solution** is a seamless electronic connection between your company and a supplier to help you find products, place orders, receive invoices, and make payments easily and efficiently.

We have two main types of eProcurement solutions - EDI and Punchout - which can be integrated with your procurement software or ERP system to automate transactions and streamline your business processes.

THE ePROCUREMENT LIFECYCLE

EDI

EDI (Electronic Data Interchange) allows us to use common formats to exchange information electronically between two organizations. These trading partners speak the same language electronically and communicate more efficiently, which minimizes manual intervention and saves you time. We support a variety of procurement formats including EDI, XML and email to integrate with your system and automate quotes, orders, and invoices.

- ✓ *Orders are sent directly to Eclipse reducing data entry*
- ✓ *Reduces delivery and payment cycle times*
- ✓ *Reduces errors*
- ✓ *Reduces paper transactions*
- ✓ *Controls expenses*
- ✓ *Increases invoice-to-purchase order matching*
- ✓ *Controls unauthorized spending*
- ✓ *Expedites the approval process*

PUNCHOUT

Do you utilize a procurement application for your purchasing? Set up a seamless electronic connection with our PunchOut solution to connect your purchasing application and manage spend. PunchOut links your eProcurement application directly to our website.

- ✓ *View up-to-date product details, images, spec sheets and more*
- ✓ *Convert your quotes to orders*
- ✓ *Save time in the shopping process with real-time pricing and availability*
- ✓ *Easily find what you need when you need it*

How It Works:

1

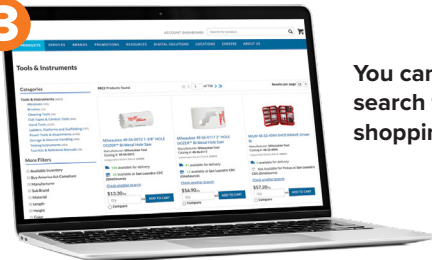

Search eProcurement system.

2

While in your procurement application's browser frame, select the link to our punchout catalog. You will "punch out" to our website without ever leaving your platform.

3

You can browse our website, search for products, build shopping carts, and more!

4

Once you are ready to check out, you will be directed back to the procurement application to complete the purchase.

5

After the order is approved, a notification is sent and we will get your order processed.

IS THIS RIGHT FOR YOU?

We currently connect with the industry's leading platforms and marketplace providers. Systems like SAP and Oracle provide modules specifically designed to manage spend. Additionally, organizations may be utilizing procurement networks or marketplaces like Coupa, Ariba, and Jaggaer.

HOW TO GET SET UP

To learn more about our eProcurement solutions or to get started, talk to your **QED Electric** Sales Representative or contact our Digital Solutions team. Our digital specialists will work with you through the discovery process to find the best solution that meets your organization's needs.
