

Anchor Bolt Matrix with Generic Template Link

Using the correct anchor bolt template is critical when creating the foundation for all anchor base poles. Pole bases differ depending on pole shaft size, pole shaft shape and pole shaft material. The matrix below provides the critical dimensions required to set the AB’s correctly. The bolt circle is measured diagonally across the pole base, the base square is the outside measurement of the base plate and the anchor bolt projection is the amount of each AB that must be exposed above the final grade. These generic anchor bolt templates are to provide a guide when creating a template using the measurements from the table and should not be printed and used. The anchor bolt templates that are sent with the pole or anchor bolts will have the correct dimensions on the template. Always check to make sure you received the correct template based on the specific pole before use.

When building the foundation for a Light Pole, it is very important to use the appropriately sized anchor bolts along with the correct anchor bolt template. All our anchor bolts and templates are in stock at our Distribution Centers and are available for next day shipping. Below is a quick reference guide to the anchor bolt template and anchor bolts that are to be used with each type pole.
